

Marmoset Jelly

Mazuri® Marmoset Jelly is a dry, flavored powder and a high protein, high energy food that provides the majority of the daily nutrients in an acceptable form to the animal. It is useful in conditions where inappetence is retarding recovery. This diet is shipped as a powder that is designed to be made into a gel prior to feeding. This product has been well accepted by other primates and may be used on a limited

basis to feed stressed animals or as a treat.

Features and Benefits

- High protein, high energy food providing high levels of nutrients.
- Highly palatable.
- Easy to prepare.
- Contains PABA – A precursor for folate synthesis by bacteria which may enhance gut health.

Product Form & Packaging

Catalog #0007066 | Dry Powder | 3.5 lb. (1.59 kg) Canister

Guaranteed Analysis (dry powder)

Crude protein not less than.....	35.00%	Moisture not more than.....	10.00%
Crude fat not less than.....	16.00%	Ash not more than	7.00%
Crude fiber not more than	4.00%		

Ingredients

Dried Skimmed Milk, Soy Protein Concentrate, Gelatin, Sucrose, Dried Egg Product, Dextrose, Corn Oil, Porcine Animal Fat Preserved with BHA and BHT, Casein, Dried Whey Protein Concentrate, Cellulose, Condensed Whey Solubles, Flaxseed Oil, Calcium Carbonate, Citric Acid, Mono and Diglycerides of Edible Fats, Maltodextrin, Natural Flavor, Dicalcium Phosphate, Monopotassium Phosphate, Artificial Flavor, Choline Bitartrate, Salt, L-Lysine, DL-Methionine, L-Ascorbyl-2-Polyphosphate (Vitamin C), Magnesium Sulfate, Ferrous Sulfate, Zinc Carbonate, Manganese Sulfate, Inositol, Vitamin E Supplement, Calcium Pantothenate, p-Aminobenzoic Acid, Menadione Sodium Bisulfite Complex (Vitamin K), Nicotinic Acid, Copper Sulfate, Thiamine Mononitrate, Riboflavin Supplement, Pyridoxine Hydrochloride, Manganese Carbonate, Folic Acid, Calcium Iodate, Cobalt Chloride, Vitamin A Acetate, Chromium Chloride, Sodium Selenite, Biotin, Cholecalciferol (Vitamin D3), Vitamin B12 Supplement.

Feeding Directions

NEVER FEED DRY PRODUCT.

As Mazuri® Marmoset Jelly is very palatable, there is the risk of over consumption, which, as gelatin is slightly purgative, could give rise to diarrhea. **The jelly should never become the sole source of food and should not constitute more than 25% of the diet (as fed).** Small amounts of fruit and other foods, preferably Mazuri® New World Primate Diet, should also be available.

- Combine, by weight, 60% boiling water and 40% Mazuri® gel powder.
 - Adjust ratios to desired texture and need. For a firmer product, use 50% boiling water to 50% powder.
 - Greater bulk can be obtained by mixing ground Mazuri® New World Primate Diet with the powder before adding the hot water to make the gel.
 - Mix fully, pour into shallow pan. Refrigerate overnight or until firm. Cut to desired size and feed.
- Intake of up to 25% prepared Mazuri® gel is recommended (never feed dry powder without combining with water).
 - Prepared jelly should only be offered when the animal may be expected to consume it in a short period of time.
 - Food intake will vary, and it is advisable to ensure that the animals are hungry and that the choice of other foods available is limited.
- Always provide plenty of fresh, clean water.
- Prepared gel should be consumed or discarded within 24 hours or stored no longer than 7 days under refrigeration or up to 1 month frozen. If frozen, it is recommended that frozen batches be individually sealed in amount of usage, as repeated entry into the container exposes gel to oxygen.
- Thoroughly wash feed and water bowls on a regular basis. It is always good practice to wash hands thoroughly after feeding and/or handling animals. This diet is not for human consumption.

Storage Conditions

Mazuri® Gel Diets have a 1-year shelf life in the dry powder form when stored in a dry environment. For best results, tightly affix lid on canister after removal of desired dosage or store contents of open bags in container with sealing lid. Store in a cool (75°F/24°C or colder), dry (approximately 50% RH) location free from rodents and insects. Do not feed moldy or insect-infested feed to animals as it may cause illness, performance loss or death. The mixed product should be stored under refrigeration for no longer than 7 days or frozen for up to 1 month. It is recommended that frozen batches be individually sealed in amount of usage, as repeated entry into the container exposes gel to oxygen. Once this product is mixed, it should be handled like raw food.
