## Feeding Directions

- Feed free-choice to rodents. Feed consumption will be based on size of rodent species and life stage. Use the following examples as guidelines, per animal:
  - **Rats:** Adult rats generally consume 16-25 grams of feed per day (approx. 4 to 6 pellets)
  - **Mice:** Adult mice generally consume 4-5 grams of feed per day (approx. 1 to 2 pellets)
  - **Pregnant, Lactating and Juvenile Mice and Rats:** Feed free choice.
- Supplemental food items (grasses, vegetables, fruits and seeds) may be provided, but should not make up more than 20% of the diet. Diets containing higher amounts of fruits, seeds and other high calorie treats may predispose animals to obesity and other nutritional health disorders.
- Always provide plenty of fresh clean water. Thoroughly wash feeding and watering bowls on a regular basis. It is always good practice to wash hands thoroughly after feeding and/or handling pets. This diet is not for human consumption.
- For breeding animals, we suggest Mazuri® Rodent 6F.

## Storage Conditions

For best results, ensure polybag seal is fully closed during storage, or store contents of open paper sack in container with sealing lid. Store in a cool (75°F or colder), dry (approximately 50% RH) location. Freezing will not harm the diet and may extend freshness. Adhere to the “Best if used by” date or use within 1 year of bag manufacturing.
