

Callitrichid Gel Diet, Plus

Mazuri® Callitrichid Gel Diet, Plus is a palatable diet formulated for higher protein and fiber content like those consumed by insectivorous primates, such as marmosets, tamarins, and other callitrichids. This diet is shipped as a powder that is designed to be made into a gel prior to feeding.

Features and Benefits

- **Higher protein and fiber** – More closely resembles insectivorous components of primate diets.
- **Convenient powder** – Mixes with hot water to form a palatable, soft, moist product.
- **Contains a higher level of fiber** – As compared to 5MI5 Callitrichid Gel.
- **Hot weather formula** – Withstands high temperatures without softening.
- **Meets NRC Non-Human Primate recommendations** – For vitamins, minerals, NDF, and ADF.

Product Form & Packaging

Catalog #1815097 | Dry Powder | 1 kg net weight canister

Guaranteed Analysis (dry powder)

Crude protein not less than	28.00%	Moisture not more than	12.00%
Crude fat not less than	10.00%	Ash not more than	7.00%
Crude fiber not more than	9.00%		

Ingredients

Glucose, shrimp meal, casein, gelatin, dried egg product, poultry by-products, soybean hulls, ground wheat, dried beet pulp, corn oil, rice flour, soybean flour, locust bean gum, ground aspen, carrageenan inulin, porcine animal fat, citric acid, stabilized poultry fat, poultry digest (flavor), dried apple pomace, powdered cellulose, flaxseed oil, wheat germ, fish meal (menhaden), dried whey, dextrose, natural orange flavoring, lecithin, fish oil, soy oil, brewers yeast, phosphoric acid, dl-methionine, taurine, salt, choline chloride, xanthan gum, calcium carbonate, l-ascorbyl-2-polyphosphate, pyridoxine hydrochloride, mixed tocopherols (a natural preservative), thiamin mononitrate, menadione sodium bisulfite complex (vitamin K), d-alpha tocopheryl acetate (a natural source vitamin E), biotin, inositol, vitamin A acetate, rosemary extract, manganous oxide, zinc oxide, ferrous carbonate, ascorbic acid, vitamin B12 supplement, niacin, copper sulfate, calcium pantothenate, ferrous sulfate, folic acid, cholecalciferol (vitamin D3), riboflavin, potassium chloride, zinc sulfate, canthaxanthin, calcium iodate, sodium selenite, chromium potassium sulfate, cobalt carbonate.

Feeding Directions

NEVER FEED DRY PRODUCT.

- Combine by weight 70% boiling water and 30% Mazuri® gel powder. Adjust ratios to desired texture and need.
 - Mix fully, pour into shallow pan. Refrigerate until firm.
 - Cut to desired size and feed.
- Intake of up to 50% prepared Mazuri® gel is recommended.
 - Feed intake will vary based on age, body size and reproductive status.
 - A targeted intake level would be 2.5% - 3.0% powder per kg of animal by body weight per day (never feed dry powder without combining with water).
 - The gel diet can be fed in combination with fruit, vegetables, browse or other food items. Care should be taken when using supplemental dietary ingredients to ensure that nutrient recommendations are assessed.
- Always provide plenty of fresh, clean water.
- Prepared gel should be consumed or discarded within 24 hours or stored no longer than 7 days under refrigeration or up to 1 month frozen.
- If frozen, it is recommended that frozen batches be individually sealed in amount of usage, as repeated entry into the container exposes gel to oxygen.
- Thoroughly wash feed and water bowls on a regular basis. It is always good practice to wash hands thoroughly after feeding and/or handling animals.
- This diet is not for human consumption.

Storage Conditions

Mazuri® Gel Diets have a 1-year shelf life in the dry powder form when stored in a dry environment. For best results, tightly affix lid on canister after removal of desired dosage or store contents of open bags in container with sealing lid. Store in a cool (75°F/24°C or colder), dry (approximately 50% RH) location free from rodents and insects. Do not feed moldy or insect-infested feed to animals as it may cause illness, performance loss or death. The mixed product should be stored under refrigeration for no longer than 7 days or frozen for up to 1 month. It is recommended that frozen batches be individually sealed in amount of usage, as repeated entry into the container exposes gel to oxygen. Once this product is mixed, it should be handled like raw food.
