### Feeding Directions

NEVER FEED DRY PRODUCT.

- Mazuri® Hoofstock Gel is designed to be a supplemental component to a total feeding system.
  - Feed intake will vary based on age, body size and reproductive status.
- Combine, by weight, 80% boiling water and 20% Mazuri® gel powder. Adjust ratios to desired texture and need.
  - Mix fully, pour into shallow pan. Refrigerate overnight or until firm.
  - Cut to desired size and feed.
- Always provide plenty of fresh, clean water.
- Prepared gel should be consumed or discarded within 24 hours or stored no longer than 7 days under refrigeration or up to 1 month frozen.
- If frozen, it is recommended that frozen batches be individually sealed in amount of usage, as repeated entry into the container exposes gel to oxygen.
- Thoroughly wash feed and water bowls on a regular basis. It is always good practice to wash hands thoroughly after feeding and/or handling animals.
- This diet is not for human consumption.

**Contains more than 15 ppm copper – If using for sheep species, ensure to balance the complete diet for total copper intake.**

### Storage Conditions

Mazuri® Gel Diets have a 1-year shelf life in the dry powder form when stored in a dry environment. For best results, tightly affix lid on canister after removal of desired dosage or store contents of open bags in container with sealing lid. Store in a cool (75°F/24°C or colder), dry (approximately 50% RH) location free from rodents and insects. Do not feed moldy or insect-infested feed to animals as it may cause illness, performance loss or death. The mixed product should be stored under refrigeration for no longer than 7 days or frozen for up to 1 month. It is recommended that frozen batches be individually sealed in amount of usage, as repeated entry into the container exposes gel to oxygen. Once this product is mixed, it should be handled like raw food.
